## Technical Information

# Proline Promass 80/83 F, M

Coriolis Mass Flow Measuring System

The universal and multivariable flowmeter for liquids and gases

### Application

The Coriolis measuring principle operates independently of the physical fluid properties, such as viscosity and density.

- Extremely accurate measurement of liquids and gases such as oils, lubricants, fuels, liquefied gases, solvents, foodstuffs and compressed gases (CNG)
- Fluid temperatures up to +350 °C
- Process pressures up to 350 bar
- Mass flow measurement up to 2200 t/h

Approvals for hazardous area:

- ATEX, FM, CSA, TÜV

Approvals in the food industry/hygiene sector:

- 3A, FDA

Connection to all common process control systems:

- HART, PROFIBUS PA/DP, FOUNDATION Fieldbus, MODBUS

Relevant safety aspects:

- Secondary containment (up to 100 bar), Pressure Equipment Directive, SIL-2

### Features and benefits

The Promass measuring devices make it possible to simultaneously record several process variables (mass/density/temperature) for various process conditions during measuring operation.

The **Proline transmitter concept** comprises:

- Modular device and operating concept resulting in a higher degree of efficiency
- Software options for batching and concentration measurement for extended range of application
- Diagnostic ability and data back-up for increased process quality

The **Promass sensors**, tried and tested in over 100000 applications, offer:

- Multivariable flow measurement in compact design
- Insensitivity to vibrations thanks to balanced two-tube measuring system
- Immune from external piping forces due to robust design
- Easy installation without taking inlet and outlet runs into consideration

## Function and system design

### Measuring principle

The measuring principle is based on the controlled generation of Coriolis forces. These forces are always present when both translational and rotational movements are superimposed.

$$F_C = 2 \cdot \Delta m (v \cdot \omega)$$

$F_C$  = Coriolis force

$\Delta m$  = moving mass

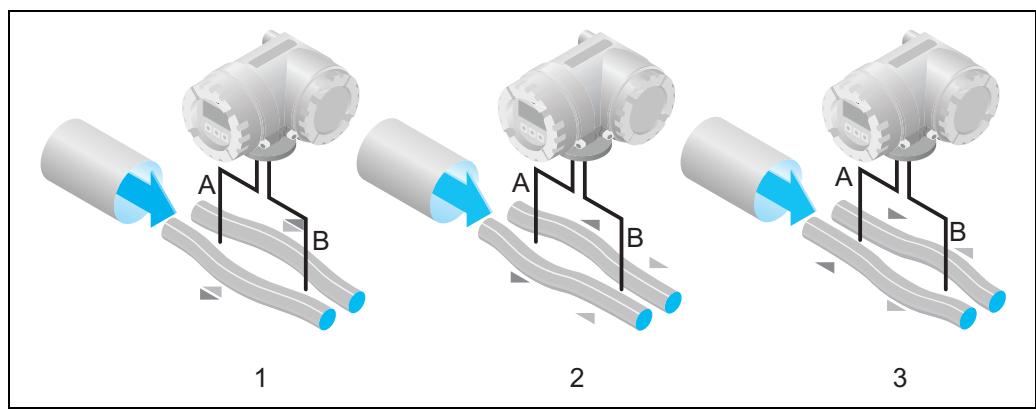

$\omega$  = rotational velocity

$v$  = radial velocity in rotating or oscillating system

The amplitude of the Coriolis force depends on the moving mass  $\Delta m$ , its velocity  $v$  in the system, and thus on the mass flow. Instead of a constant angular velocity  $\omega$ , the Promass sensor uses oscillation.

In the Promass F and M sensors, two parallel measuring tubes containing flowing fluid oscillate in antiphase, acting like a tuning fork. The Coriolis forces produced at the measuring tubes cause a phase shift in the tube oscillations (see illustration):

- At zero flow, in other words when the fluid is at a standstill, the two tubes oscillate in phase (1).
- Mass flow causes deceleration of the oscillation at the inlet of the tubes (2) and acceleration at the outlet (3).

The phase difference (A-B) increases with increasing mass flow. Electrodynamical sensors register the tube oscillations at the inlet and outlet.

System balance is ensured by the antiphase oscillation of the two measuring tubes. The measuring principle operates independently of temperature, pressure, viscosity, conductivity and flow profile.

### Density measurement

The measuring tubes are continuously excited at their resonance frequency. A change in the mass and thus the density of the oscillating system (comprising measuring tubes and fluid) results in a corresponding, automatic adjustment in the oscillation frequency. Resonance frequency is thus a function of fluid density. The microprocessor utilizes this relationship to obtain a density signal.

### Temperature measurement

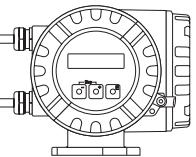

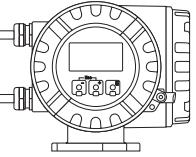

The temperature of the measuring tubes is determined in order to calculate the compensation factor due to temperature effects. This signal corresponds to the process temperature and is also available as an output.

**Measuring system**

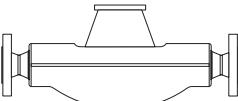

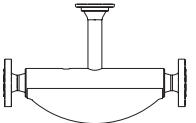

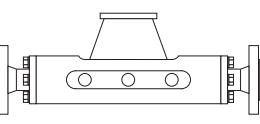

The measuring system consists of a transmitter and a sensor. Two versions are available:

- Compact version: transmitter and sensor form a mechanical unit
- Remote version: transmitter and sensor are mounted physically separate from one another

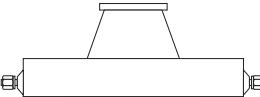

**Transmitter**

## Input

### Measured variable

- Mass flow (proportional to the phase difference between two sensors mounted on the measuring tube to register a phase shift in the oscillation)
- Fluid density (proportional to resonance frequency of the measuring tube)
- Fluid temperature (measured with temperature sensors)

### Measuring range

#### Measuring ranges for liquids

DN	Range for full scale values (liquids) $m_{\min(F)}$ to $m_{\max(F)}$
8	0 to 2000 kg/h
15	0 to 6500 kg/h
25	0 to 18000 kg/h
40	0 to 45000 kg/h
50	0 to 70000 kg/h
80	0 to 180000 kg/h
100 (only Promass F)	0 to 350000 kg/h
150 (only Promass F)	0 to 800000 kg/h
250 (only Promass F)	0 to 2200000 kg/h

#### Measuring ranges for gases

The full scale values depend on the density of the gas. Use the formula below to calculate the full scale values:

$$m_{\max(G)} = m_{\max(F)} \cdot \rho_{(G)} : x \text{ [kg/m}^3\text{]}$$

$m_{\max(G)}$  = max. full scale value for gas [kg/h]

$m_{\max(F)}$  = max. full scale value for liquid [kg/h]

$\rho_{(G)}$  = gas density in [kg/m<sup>3</sup>] under process conditions

x = 160 (Promass F DN 8 to 100, Promass M); x = 250 (Promass F DN 150 to 250)

Here,  $m_{\max(G)}$  can never be greater than  $m_{\max(F)}$

*Calculation example for gas:*

- Sensor type: Promass F, DN 50
- Gas: air with a density of  $60.3 \text{ kg/m}^3$  (at  $20^\circ\text{C}$  and 50 bar)
- Measuring range (liquid): 70000 kg/h
- $x = 160$  (for Promass F DN 50)

Max. possible full scale value:

$$m_{\max(G)} = m_{\max(F)} \cdot \rho_{(G)} : x [\text{kg/m}^3] = 70000 \text{ kg/h} \cdot 60.3 \text{ kg/h} : 160 \text{ kg/m}^3 = 26400 \text{ kg/h}$$

*Recommended measuring ranges:*

See information in the “Limiting flow” Section → Page 21 ff.

<b>Operable flow range</b>	Greater than 1000 : 1. Flow rates above the preset full scale value do not overload the amplifier, i.e. the totalizer values are registered correctly.
----------------------------	--

<b>Input signal</b>	<p><b>Status input (auxiliary input):</b> U = 3 to 30 V DC, <math>R_i = 5 \text{ k}\Omega</math>, galvanically isolated. Configurable for: totalizer reset, positive zero return, error message reset, zero point adjustment start, batching start/stop (optional).</p> <p><b>Current input (only Promass 83)</b> Active/passive selectable, galvanically isolated, resolution: <math>2 \mu\text{A}</math></p> <ul style="list-style-type: none"> <li>■ Active: 4 to 20 mA, <math>R_L &lt; 700 \Omega</math>, <math>U_{out} = 24 \text{ V DC}</math>, short-circuit proof</li> <li>■ Passive: 0/4 to 20 mA, <math>R_i = 150 \Omega</math>, <math>U_{max} = 30 \text{ V DC}</math></li> </ul>
---------------------	--

## Output

<b>Output signal</b>	<b>Promass 80</b>
	<p><i>Current output:</i> Active/passive selectable, galvanically isolated, time constant selectable (0.05 to 100 s), full scale value selectable, temperature coefficient: typically 0.005% of full scale value/C, resolution: <math>0.5 \mu\text{A}</math></p> <ul style="list-style-type: none"> <li>■ Active: 0/4 to 20 mA, <math>R_L &lt; 700 \Omega</math> (for HART: <math>R_L \geq 250 \Omega</math>)</li> <li>■ Passive: 4 to 20 mA; supply voltage <math>U_S</math> 18 to 30 V DC; <math>R_i \geq 150 \Omega</math></li> </ul> <p><i>Pulse/frequency output:</i> Passive, open collector, 30 V DC, 250 mA, galvanically isolated.</p> <ul style="list-style-type: none"> <li>■ Frequency output: end frequency 2 to 1000 Hz (<math>f_{max} = 1250 \text{ Hz}</math>), on/off ratio 1:1, pulse width max. 2 s</li> <li>■ Pulse output: pulse value and pulse polarity can be selected, pulse width adjustable (0.5 to 2000 ms).</li> </ul> <p><i>PROFIBUS PA interface:</i></p> <ul style="list-style-type: none"> <li>■ PROFIBUS PA in accordance with EN 50170 Volume 2, IEC 61158-2 (MBP), galvanically isolated</li> <li>■ Profile Version 3.0</li> <li>■ Current consumption: 11 mA</li> <li>■ Permissible supply voltage: 9 to 32 V</li> <li>■ Bus connection with integrated reverse polarity protection</li> <li>■ Error current FDE (Fault Disconnection Electronic) = 0 mA</li> <li>■ Data transmission rate: 31.25 kB/s</li> <li>■ Signal encoding: Manchester II</li> <li>■ Function blocks: 4 x Analog Input, 1 x Totalizer</li> <li>■ Output data: Mass flow, Volume flow, Density, Temperature, Totalizer</li> <li>■ Input data: Positive zero return (ON/OFF), Zero point adjustment, Measuring mode, Totalizer control</li> <li>■ Bus address can be set at the measuring device via miniature switches or the onsite display (optional)</li> </ul>

### Promass 83

#### *Current output:*

Active/passive selectable, galvanically isolated, time constant selectable (0.05 to 100 s), full scale value selectable, temperature coefficient: typically 0.005% of full scale value/C, resolution: 0.5  $\mu$ A

- Active: 0/4 to 20 mA,  $R_L < 700 \Omega$  (for HART:  $R_L \geq 250 \Omega$ )
- Passive: 4 to 20 mA; supply voltage  $U_S$  18 to 30 V DC;  $R_i \geq 150 \Omega$

#### *Pulse/frequency output:*

Active/passive selectable, galvanically isolated

- Active: 24 V DC, 25 mA (max. 250 mA during 20 ms),  $R_L > 100 \Omega$
- Passive: open collector, 30 V DC, 250 mA
- Frequency output: end frequency 2 to 10000 Hz ( $f_{max} = 12500$  Hz), on/off ratio 1:1, pulse width max. 2 s
- Pulse output: pulse value and pulse polarity can be selected, pulse width adjustable (0.05 to 2000 ms)

#### *PROFIBUS DP interface:*

- PROFIBUS DP in accordance with EN 50170 Volume 2
- Profile Version 3.0
- Data transmission rate: 9.6 kBaud to 12 MBaud
- Automatic data transmission rate recognition
- Signal encoding: NRZ-Code
- Function blocks: 6 x Analog Input, 3 x Totalizer
- Output data: Mass flow, Volume flow, Corrected volume flow, Density, Reference density, Temperature, Totalizer 1 to 3
- Input data: Positive zero return (ON/OFF), Zero point adjustment, Measuring mode, Totalizer control
- Bus address can be set at the measuring device via miniature switches or the onsite display (optional)
- Available output combination → Page 10

#### *PROFIBUS PA interface:*

- PROFIBUS PA in accordance with EN 50170 Volume 2, IEC 61158-2 (MBP), galvanically isolated
- Data transmission rate: 31.25 kBit/s
- Current consumption: 11 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Signal encoding: Manchester II
- Function blocks: 6 x Analog Input, 3 x Totalizer
- Output data: Mass flow, Volume flow, Corrected volume flow, Density, Reference density, Temperature, Totalizer 1 to 3
- Input data: Positive zero return (ON/OFF), Zero point adjustment, Measuring mode, Totalizer control
- Bus address can be set at the measuring device via miniature switches or the onsite display (optional)
- Available output combination → Page 10

#### *MODBUS interface:*

- MODBUS device type: slave
- Address range: 1 to 247
- Supported function codes: 03, 04, 06, 08, 16, 23
- Broadcast: supported with the function codes 06, 16, 23
- Physical interface: RS485 in accordance with EIA/TIA-485 standard
- Supported baudrate: 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 Baud
- Transmission mode: RTU or ASCII
- Response times:
  - Direct data access = typically 25 to 50 ms
  - Auto-scan buffer (data range) = typically 3 to 5 ms
- Available output combination → Page 10

*FOUNDATION Fieldbus interface:*

- FOUNDATION Fieldbus H1, IEC 61158-2, galvanically isolated
- Data transmission rate: 31.25 kBit/s
- Current consumption: 12 mA
- Permissible supply voltage: 9 to 32 V
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Bus connection with integrated reverse polarity protection
- Signal encoding: Manchester II
- ITK Version 4.01
- Function blocks: 7 x Analog Input, 1 x Digital Output, 1 x PID
- Output data: Mass flow, Volume flow, Corrected volume flow, Density, Reference density, Temperature, Totalizer 1 to 3
- Input data: Positive zero return (ON/OFF), Zero point adjustment, Measuring mode, Reset totalizer
- Link master function (LM) is supported

**Signal on alarm***Current output:*

Failsafe mode selectable (e.g. in accordance with NAMUR Recommendation NE 43)

*Pulse/frequency output:*

Failsafe mode selectable

**Status output (Promass 80):**

“Nonconductive” in the event of a fault or if the power supply fails

**Relay output (Promass 83):**

“Dead” in the event of a fault or if the power supply fails

**Load**

see “Output signal”

**Low flow cut off**

Switch points for low flow cut off are selectable

**Galvanic isolation**

All circuits for inputs, outputs, and power supply are galvanically isolated from each other.

**Switching output****Status output (Promass 80):**

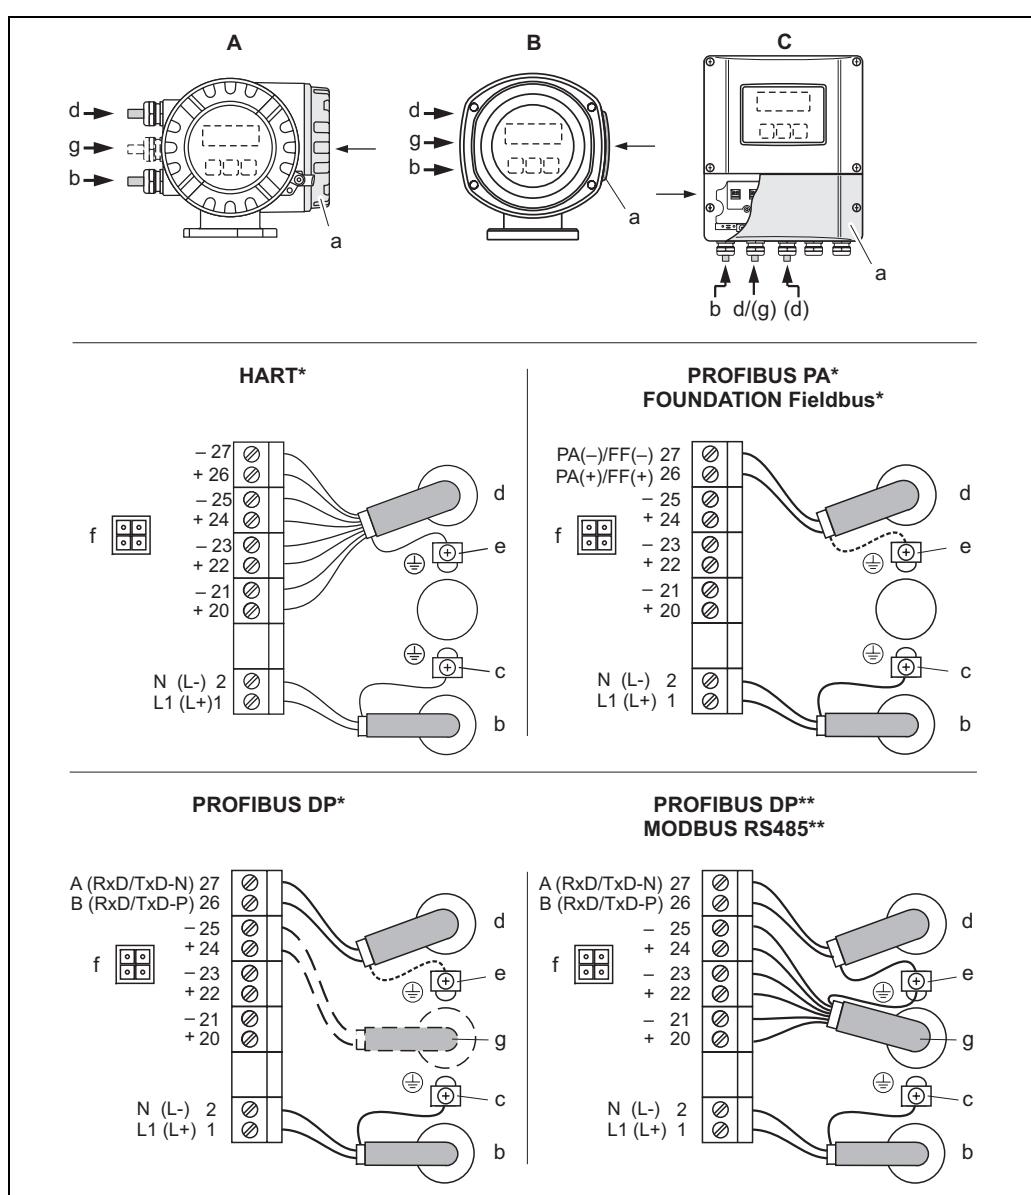

Open collector, max. 30 V DC / 250 mA, galvanically isolated.  
Configurable for: error messages, Empty Pipe Detection (EPD), flow direction, limit values.

**Relay output (only Promass 83):**

Normally closed (NC or break) or normally open (NO or make) contacts available (factory setting: relay 1 = NO, relay 2 = NC), max. 30 V / 0.5 A AC; 60 V / 0.1 A DC, galvanically isolated.

## Power supply

### Electrical connection, measuring unit

Connecting the transmitter, cable cross-section: max. 2.5 mm<sup>2</sup>

#### Electrical connection, remote version

a0003081

##### Connection of remote version

- a Wall-mount housing: non-hazardous area and ATEX II3G / Zone 2 → See separate Ex documentation
- b Wall-mount housing: ATEX II2G / Zone 1 / FM/CSA → See separate Ex documentation
- c Flange version remote version

Terminal No.: 4/5 = gray; 6/7 = green; 8 = yellow; 9/10 = pink; 11/12 = white; 41/42 = brown

**Supply voltage**  
 85 to 260 V AC, 45 to 65 Hz  
 20 to 55 V AC, 45 to 65 Hz  
 16 to 62 V DC

**Cable entries**  
*Power-supply and signal cables (inputs/outputs):*  
 ■ Cable entry M20 x 1.5 (8 to 12 mm)  
 ■ Thread for cable entries, 1/2" NPT, G 1/2"

*Connecting cable for remote version:*

- Cable entry M20 x 1.5 (8 to 12 mm)
- Thread for cable entries, 1/2" NPT, G 1/2"

**Cable specifications,  
remote version**

- 6 x 0.38 mm<sup>2</sup> PVC cable with common shield and individually shielded cores
- Conductor resistance: ≤ 50 Ω/km
- Capacitance: core/shield: ≤ 420 pF/m
- Cable length: max. 20 m
- Operating temperature: max. +105 °C

*Operation in zones of severe electrical interference:*

The measuring device complies with the general safety requirements in accordance with EN 61010, the EMC requirements of EN 61326/A1, and NAMUR Recommendation NE 21/43.

**Power consumption**

AC: <15 VA (including sensor)  
DC: <15 W (including sensor)

*Switch-on current:*

- Max. 13.5 A (< 50 ms) at 24 V DC
- Max. 3 A (< 5 ms) at 260 V AC

**Power supply failure****Promass 80***Lasting min. 1 power cycle*

- EEPROM saves measuring system data if the power supply fails
- HistoROM/S-DAT: exchangeable data storage chip with sensor specific data (nominal diameter, serial number, calibration factor, zero point, etc.)

**Promass 83***Lasting min. 1 power cycle:*

- EEPROM and T-DAT save measuring system data if the power supply fails
- HisotROM/S-DAT: exchangeable data storage chip with sensor specific data (nominal diameter, serial number, calibration factor, zero point, etc.)

**Potential equalization**

No measures necessary.

## Performance characteristics

**Reference operating  
conditions***Error limits following ISO/DIS 11631:*

- 20 °C to 30 °C; 2 to 4 bar
- Calibration systems as per national norms
- Zero point calibrated under operating conditions
- Field density calibrated (or special density calibration)

**Maximum measured error**

The following values refer to the pulse/frequency output. The additional measured error at the current output is typically ±5 µA.

*o.r. = of reading*

**Mass flow (liquid):***Promass 80 F, M:*

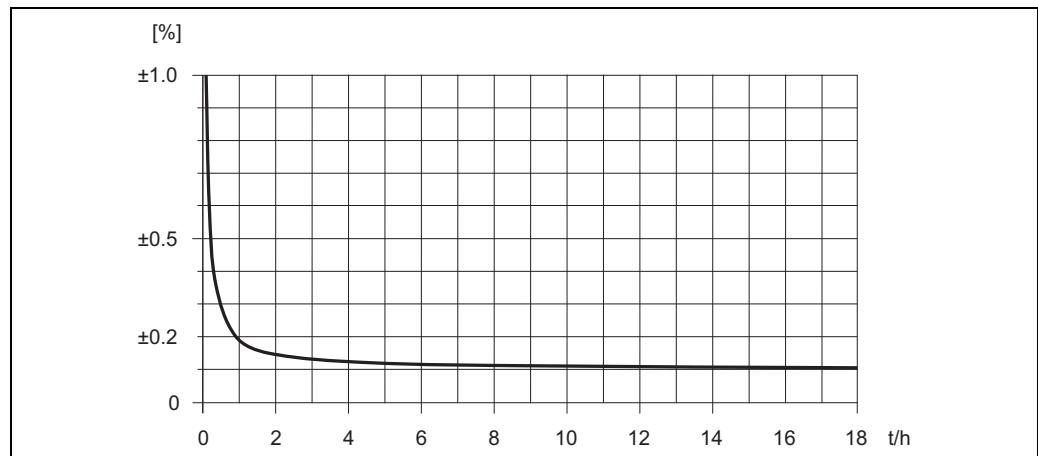

±0.15% ± [(zero point stability : measured value) · 100]% o.r.

*Promass 83 F, M:*

±0.10% ± [(zero point stability : measured value) · 100]% o.r.

**Mass flow (gas):***Promass 80/83 F:* $\pm 0.35\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$ *Promass 80/83 M:* $\pm 0.50\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$ **Volume flow (liquid)***Promass 80 F:* $\pm 0.20\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$ *Promass 83 F:* $\pm 0.15\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$ *Promass 80/83 M:* $\pm 0.25\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$ **Zero point stability (Promass F, M):**

DN	Max. full scale value [kg/h] or [l/h]	Zero point stability		
		Promass F [kg/h] or [l/h]	Promass F (high-temperature) [kg/h] or [l/h]	Promass M [kg/h] or [l/h]
8	2000	0.030	–	0.100
15	6500	0.200	–	0.325
25	18000	0.540	1.80	0.90
40	45000	2.25	–	2.25
50	70000	3.50	7.00	3.50
80	180000	9.00	18.00	9.00
100	350000	14.00	–	–
150	800000	32.00	–	–
250	2200000	88.00	–	–

**Sample calculation***Max. measured error in % of measured value (example: Promass 83 F / DN 25)*

a0004604

Calculation example (mass flow, liquid):

Given: Promass 83 F / DN 25, measured value flow = 8000 kg/h

Max. measured error:  $\pm 0.10\% \pm [(\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

Max. measured error:  $\pm 0.10\% \pm 0.54 \text{ kg/h} : 8000 \text{ kg/h} \cdot 100\% = \pm 0.107\%$

### **Density (liquid)**

1 g/cc = 1 kg/l

*Standard calibration:*

Promass F

$\pm 0.01 \text{ g/cc}$

Promass M

$\pm 0.02 \text{ g/cc}$

*Special density calibration (optional), not for high-temperature version  
(calibration range = 0.8 to 1.8 g/cc, 5 °C to 80 °C):*

Promass F

$\pm 0.001 \text{ g/cc}$

Promass M

$\pm 0.002 \text{ g/cc}$

*After field density calibration or under reference conditions:*

Promass F

$\pm 0.0005 \text{ g/cc}$

Promass M

$\pm 0.0010 \text{ g/cc}$

### **Temperature**

Promass F, M:

$\pm 0.5 \text{ }^{\circ}\text{C} \pm 0.005 \cdot T$  (T = medium temperature in  $^{\circ}\text{C}$ )

### **Repeatability**

#### **Mass flow (liquid):**

$\pm 0.05\% \pm [1/2 \cdot (\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

#### **Mass flow (gas):**

$\pm 0.25\% \pm [1/2 \cdot (\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

#### **Volume flow (liquid):**

Promass F:

$\pm 0.05\% \pm [1/2 \cdot (\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

Promass M:

$\pm 0.10\% \pm [1/2 \cdot (\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

o.r. = of reading

Zero point stability: see "Max. measured error" → Page 12 ff.

Calculation example (mass flow, liquid):

Given: Promass 83 F / DN 25, measured value flow = 8000 kg/h

Repeatability:  $\pm 0.05\% \pm [1/2 \cdot (\text{zero point stability} : \text{measured value}) \cdot 100]\% \text{ o.r.}$

Repeatability:  $\pm 0.05\% \pm 1/2 \cdot 0.54 \text{ kg/h} : 8000 \text{ kg/h} \cdot 100\% = \pm 0.053\%$

**Density measurement (liquid)**

1 g/cc = 1 kg/l

*Promass F:* $\pm 0.00025 \text{ g/cc}$ *Promass M:* $\pm 0.0005 \text{ g/cc}$ **Temperature measurement** $\pm 0.25^\circ\text{C} \pm 0.0025 \cdot T$  ( $T$  = medium temperature in  $^\circ\text{C}$ )**Influence of medium temperature**

When there is a difference between the temperature for zero point adjustment and the process temperature, the typical measured error of the Promass sensor is  $\pm 0.0002\%$  of the full scale value/ $^\circ\text{C}$ .

**Influence of medium pressure**

The table below shows the effect on accuracy of mass flow due to a difference between calibration pressure and process pressure.

DN	Promass F Promass F high-temperature [% o.r./bar]	Promass M [% o.r./bar]	Promass M (high pressure) [% o.r./bar]
8	No influence	0.009	0.006
15	No influence	0.008	0.005
25	No influence	0.009	0.003
40	-0.003	0.005	-
50	-0.008	No influence	-
80	-0.009	No influence	-
100	-0.012	-	-
150	-0.009	-	-
250	-0.009	-	-
o.r. = of reading			

## Operating conditions: Installation

**Installation instructions**

Note the following points:

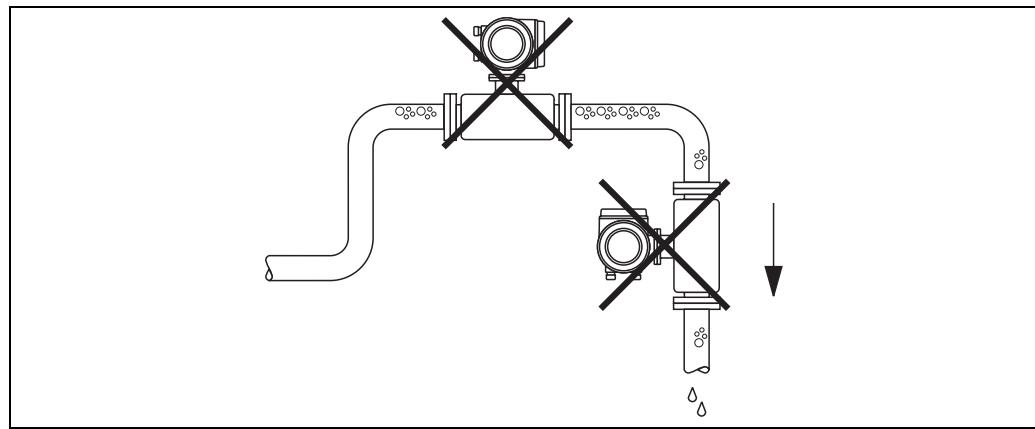

- No special measures such as supports are necessary. External forces are absorbed by the construction of the instrument, for example the secondary containment.
- The high oscillation frequency of the measuring tubes ensures that the correct operation of the measuring system is not influenced by pipe vibrations.
- No special precautions need to be taken for fittings which create turbulence (valves, elbows, T-pieces, etc.), as long as no cavitation occurs.
- For mechanical reasons and to protect the pipe, support is recommended for heavy sensors.

### Mounting location

Entrained air or gas bubbles in the measuring tube can result in an increase in measuring errors.

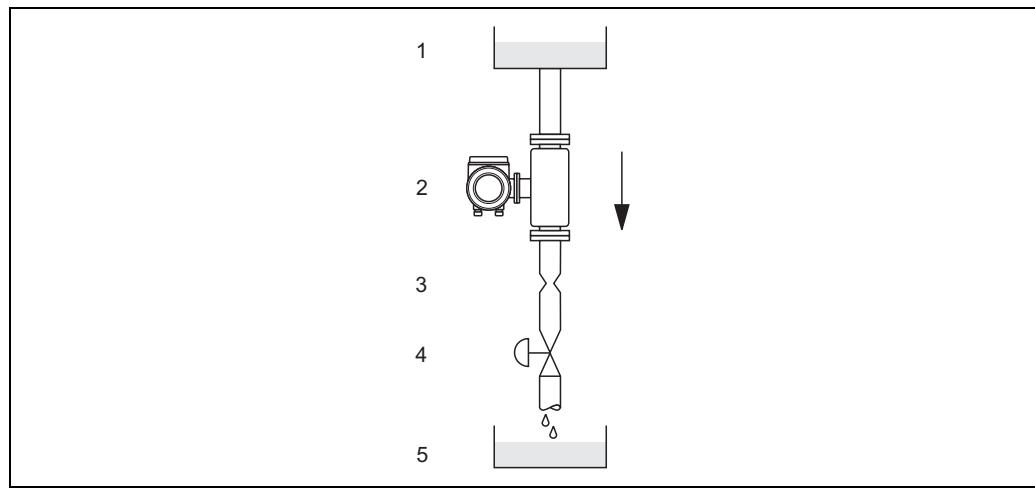

**Avoid** the following mounting locations in the pipe:

- Highest point of a pipeline. Risk of air accumulating.
- Directly upstream from a free pipe outlet in a vertical pipeline

*Mounting location*

Notwithstanding the above, the installation proposal below permits installation in an open vertical pipeline. Pipe restrictions or the use of an orifice with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.

*Installation in a down pipe (e.g. for batching applications)*

- 1 Supply tank
- 2 Sensor
- 3 Orifice plate, pipe restriction (see Table)
- 4 Valve
- 5 Batching tank

DN	8	15	25	40	50	80	100 <sup>1)</sup>	150 <sup>1)</sup>	250 <sup>1)</sup>
Ø Orifice plate, pipe restriction [mm]	6	10	14	22	28	50	65	90	150
1) only Promass F									

### Orientation

Make sure that the direction of the arrow on the nameplate of the sensor matches the direction of flow (direction of fluid flow through the pipe).

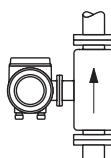

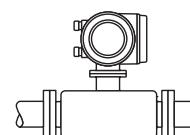

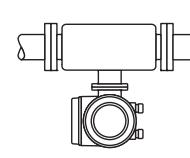

#### *Vertical (View V)*

Recommended orientation with upward direction of flow. When fluid is not flowing, entrained solids will sink down and gases will rise away from the measuring tube. The measuring tubes can be completely drained and protected against solids buildup.

#### *Horizontal*

The measuring tubes must be horizontal and beside each other. When installation is correct the transmitter housing is above or below the pipe (Views H1/H2). Always avoid having the transmitter housing in the same horizontal plane as the pipe.

Please note the special installation instructions! → Page 18

	Promass F, M Standard, compact	Promass F, M Standard, remote	Promass F High-temperature, compact	Promass F High-temperature, remote
<b>Fig. V: vertical orientation</b>  a0004572	✓✓	✓✓	✓✓	✓✓
<b>Fig. H1: horizontal orientation</b> Transmitter head up  a0004576	✓✓	✓✓	✗ (TM = >200 °C) ①	✓ (TM = >200 °C) ①
<b>Fig. H2: horizontal orientation</b> Transmitter head down  a0004580	✓✓ ②	✓✓ ②	✓✓ ②	✓✓ ②
<b>✓✓</b> = Recommended orientation <b>✓</b> = Orientation recommended in certain situations <b>✗</b> = Impermissible orientation				

In order to ensure that the maximum permissible ambient temperature for the transmitter ( $-20^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ , optional  $-40^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ ) is not exceeded, we recommend the following orientations:

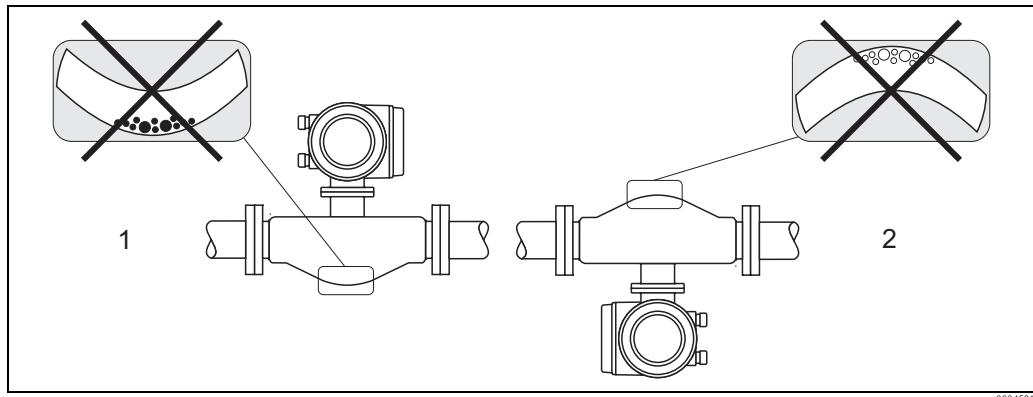

① = For fluids with very high temperatures ( $> 200^{\circ}\text{C}$ ), we recommend the horizontal orientation with the transmitter head pointing downwards (Fig. H2) or the vertical orientation (Fig. V).

② = For fluids with low temperatures, we recommend the horizontal orientation with the transmitter head pointing upwards (Fig. H1) or the vertical orientation (Fig. V).

### Special installation instructions for Promass F

**Caution!**

Both measuring tubes of Promass F are slightly curved. The position of the sensor, therefore, has to be matched to the fluid properties when the sensor is installed horizontally.

a0004581

#### Horizontal installation with Promass F

- 1 Not suitable for fluids with entrained solids. Risk of solids accumulating.
- 2 Not suitable for outgassing fluids. Risk of air accumulating.

### Heating

Some fluids require suitable measures to avoid heat transfer at the sensor. Heating can be electric, e.g. with heated elements, or by means of hot water or steam pipes made of copper.

**Caution!**

- Risk of electronics overheating! Consequently, make sure that the adapter between the sensor and transmitter and the connection housing of the remote version always remain free of insulating material. Note that a certain orientation might be required, depending on the fluid temperature. → Page 17
- With a fluid temperature between 200 °C to 350 °C, heating is not permissible for the compact version of the high-temperature version.

If using an electric trace heating system whose heating is regulated via phase angle control or pulse packages, influence on the measured values cannot be ruled out due to magnetic fields (i.e. for values that are greater than the values approved by the EN standard (sine 30 A/m)). In such instances, it is necessary to magnetically shield the sensor (apart from Promass M).

The secondary containment can be shielded with tin plate or electric sheets without privileged direction (e.g. V330-35A) with the following properties:

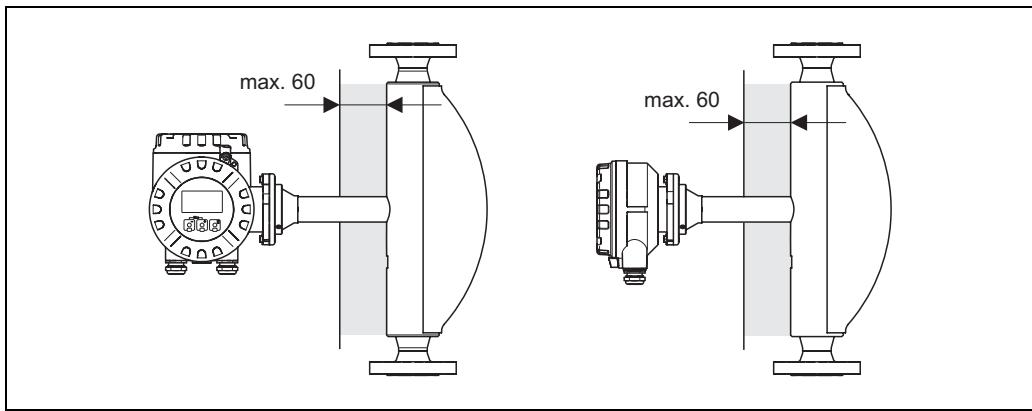

- Relative magnetic permeability  $\mu_r \geq 300$
- Plate thickness  $d \geq 0.35$  mm

- Information on permitted temperature ranges → Page 20

Special heating jackets, which can be ordered separately from Endress+Hauser as an accessory, are available for the sensors.

### Thermal insulation

Some fluids require suitable measures to avoid heat transfer at the sensor. A wide range of materials can be used to provide the required thermal insulation.

a0004614

*In the case of the Promass F high-temperature version, a maximum insulation thickness of 60 mm must be observed in the area of the electronics/neck.*

If the Promass F high-temperature version is installed horizontally (with transmitter head pointing upwards), an insulation thickness of min. 10 mm is recommended to reduce convection. The maximum insulation thickness of 60 mm must be observed.

### Zero point adjustment

All Promass devices are calibrated to state-of-the-art technology. The zero point determined in this way is imprinted on the nameplate.

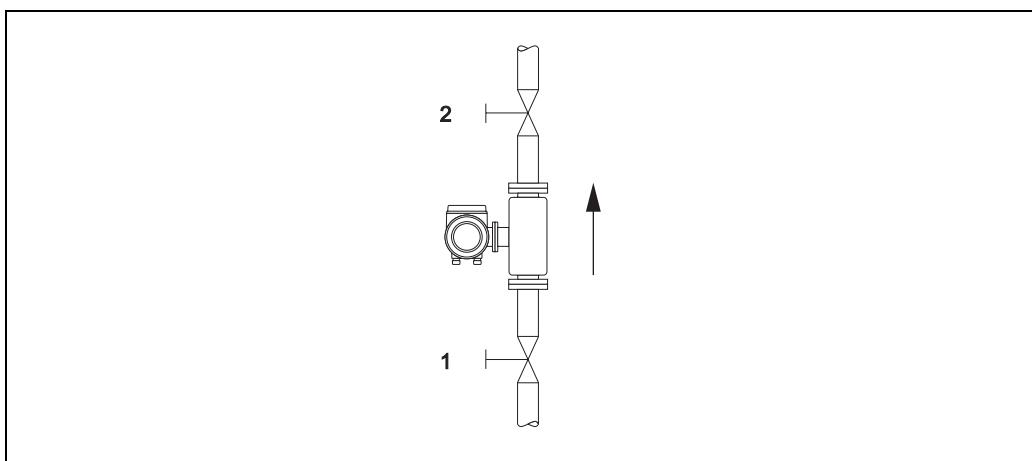

Calibration takes place under reference conditions. → Page 12 ff.  
Promass therefore does **not** require zero point adjustment!

Experience shows that the zero point adjustment is advisable only in special cases:

- To achieve highest measuring accuracy also with very low flow rates
- Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

Please note the following before carrying out the adjustment:

- The adjustment can only be performed with fluids that have no gas or solid contents.
- Zero point adjustment is performed with the measuring tubes completely filled and at zero flow ( $v = 0 \text{ m/s}$ ). This can be achieved, for example, with shutoff valves upstream and/or downstream of the sensor or by using existing valves and gates.
  - Normal operation → valves 1 and 2 open
  - Zero point adjustment *with* pump pressure → valve 1 open / valve 2 closed
  - Zero point adjustment *without* pump pressure → valve 1 closed / valve 2 open

a0003601

*Zero point adjustment and shutoff valves*

<b>Inlet and outlet runs</b>	There are no installation requirements regarding inlet and outlet runs.
<b>Length of connecting cable</b>	Max. 20 meters (remote version)
<b>System pressure</b>	<p>It is important to ensure that cavitation does not occur, because it would influence the oscillation of the measuring tube. No special measures need to be taken for fluids which have properties similar to water under normal conditions.</p> <p>In the case of liquids with a low boiling point (hydrocarbons, solvents, liquefied gases) or in suction lines, it is important to ensure that pressure does not drop below the vapor pressure and that the liquid does not start to boil. It is also important to ensure that the gases that occur naturally in many liquids do not outgas. Such effects can be prevented when system pressure is sufficiently high.</p> <p>For this reason, the following mounting locations are preferred:</p> <ul style="list-style-type: none"> <li>■ Downstream from pumps (no risk of partial vacuum)</li> <li>■ At the lowest point in a vertical pipe</li> </ul>

## Operating conditions: Environment

<b>Ambient temperature range</b>	Standard: -20 °C to +60 °C (sensor, transmitter) Optional: -40 °C to +60 °C (sensor, transmitter)
	Note!
	<ul style="list-style-type: none"> <li>■ Install the device at a shady location. Avoid direct sunlight, particularly in warm climatic regions.</li> <li>■ At ambient temperatures below -20 °C the readability of the display may be impaired.</li> </ul>
<b>Storage temperature</b>	-40 °C to +80 °C (preferably +20 °C)
<b>Degree of protection</b>	Standard: IP 67 (NEMA 4X) for transmitter and sensor
<b>Shock resistance</b>	In accordance with IEC 68-2-31
<b>Vibration resistance</b>	Acceleration up to 1 g, 10 to 150 Hz, following IEC 68-2-6
<b>Electromagnetic compatibility (EMC)</b>	To EN 61326/A1 (IEC 1326) and NAMUR Recommendation NE 21

## Operating conditions: Process

<b>Medium temperature range</b>	<b>Sensor</b>
	<i>Promass F:</i> -50 °C to +200 °C
	<i>Promass F (high-temperature version):</i> -50 °C to +350 °C
	<i>Promass M:</i> -50 °C to +150 °C
	<b>Seals:</b>
	<i>Promass F:</i> No internal seals

*Promass M:*

Viton -15 °C to +200 °C; EPDM -40 °C to +160 °C; silicone -60 °C to +200 °C; Kalrez -20 °C to +275 °C;  
FEP sheathed (not for gas applications): -60 °C to +200 °C

---

**Medium pressure range  
(nominal pressure)**

**Flanges:**

Promass F:  
DIN PN 16 to 100 / ANSI Cl 150, Cl 300, Cl 600 / JIS 10K, 20K, 40K, 63K

Promass F (high-temperature version):  
DIN PN 40, 64, 100 / ANSI Cl 150, Cl 300, Cl 600 / JIS 10K, 20K, 63K

Promass M:  
DIN PN 40 to 100 / ANSI Cl 150, Cl 300, Cl 600 / JIS 10K, 20K, 40K, 63K

**Promass M (high-pressure version):**

Measuring tubes, connector, couplings: max. 350 bar

**Pressure ranges of secondary containment:**

*Promass F:*

DN 8 to 50: 40 bar or 600 psi; DN 80: 25 bar or 375 psi;  
DN 100 to 150: 16 bar or 250 psi; DN 250: 10 bar or 150 psi

*Promass M:*

100 bar or 1500 psi

Warning!

In case a danger of measuring tube failure exists due to process characteristics, e.g. with corrosive process fluids, we recommend the use of sensors whose secondary containment is equipped with special pressure monitoring connections (ordering option). With the help of these connections, fluid collected in the secondary containment in the event of tube failure can be bled off. This is especially important in high pressure gas applications. These connections can also be used for gas circulation and/or gas detection. Dimensions → Page 27 ff.

---

**Limiting flow**

See information in the “Measuring range” Section → Page 5

Select nominal diameter by optimizing between required flow range and permissible pressure loss. An overview of max. possible full scale values can be found in the “Measuring range” Section.

- The minimum recommended full scale value is approx. 1/20 of the max. full scale value.
- In most applications, 20 to 50% of the maximum full scale value can be considered ideal.
- Select a lower full scale value for abrasive substances such as fluids with entrained solids (flow velocity <1 m/s).
- For gas measurement the following rules apply:
  - Flow velocity in the measuring tubes should not be more than half the sonic velocity (0.5 Mach).
  - The maximum mass flow depends on the density of the gas: formula → Page 5

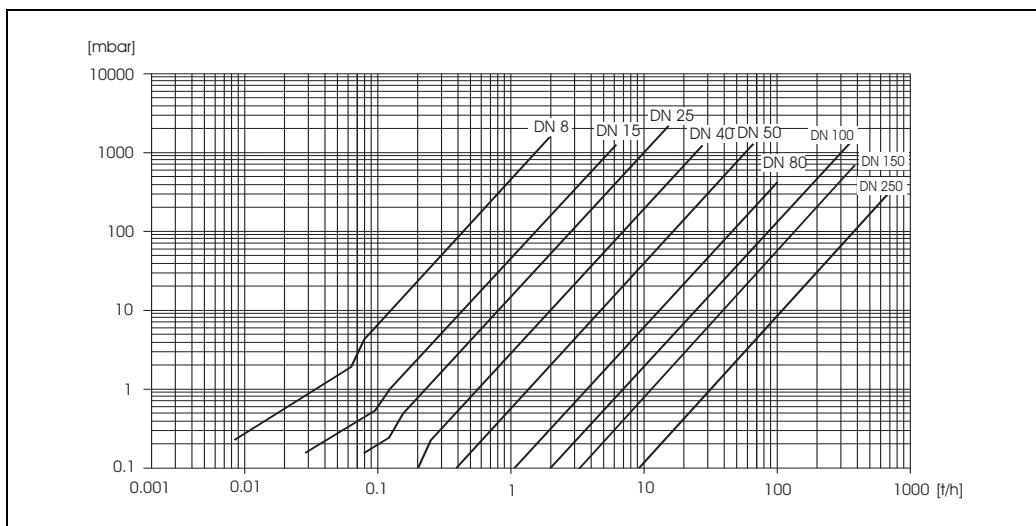

**Pressure loss**

Pressure loss depends on the fluid properties and on the flow rate. The following formulae can be used to approximately calculate the pressure loss:

Reynolds number	$Re = \frac{2 \cdot m}{\pi \cdot d \cdot v \cdot \rho}$	a0004623
$Re \geq 2300^1)$	$\Delta p = K \cdot v^{0.25} \cdot m^{1.85} \cdot \rho^{-0.86}$	a0004626
$Re < 2300$	$\Delta p = K1 \cdot v \cdot m + \frac{K2 \cdot v^{0.25} \cdot m^2}{\rho}$	a0004628
$\Delta p$ = pressure loss [mbar]	$\rho$ = fluid density [kg/m <sup>3</sup> ]	
$v$ = kinematic viscosity [m <sup>2</sup> /s]	$d$ = inside diameter of measuring tubes [m]	
$m$ = mass flow [kg/s]	K to K2 = constants (depending on nominal diameter)	
1) To compute the pressure loss for gases, always use the formula for $Re \geq 2300$ .

**Material****Transmitter housing:**

- Compact housing: stainless steel 1.4301/304
- Compact housing: powder coated die-cast aluminum
- Wall-mount housing: powder coated die-cast aluminum
- Remote field housing: powder-coated die-cast aluminum

**Sensor housing / containment:***Promass F:*

Acid and alkali-resistant outer surface  
 DN 8 to 50: stainless steel 1.4301/304  
 DN 80 to 250: stainless steel 1.4301/304 and 1.4308/304L

*Promass M:*

Acid and alkali-resistant outer surface  
 DN 8 to 50: steel, chemically nickel-plated  
 DN 80: stainless steel

**Connection housing, sensor (remote version):**

- Stainless steel 1.4301/304 (standard)
- Powder coated die-cast aluminum (high-temperature version and version for heating)

**Process connections***Promass F:*

- Flanges EN 1092-1 (DIN 2501) / ANSI B16.5 / JIS B2238 → Stainless steel 1.4404/316L
- Flanges EN 1092-1 (DIN 2501) / ANSI B16.5 / JIS B2238 → Alloy C-22 2.4602/N 06022
- Flange DIN 11864-2 Form A (flat flange) → Stainless steel 1.4404/316L
- Dairy fitting DIN 11851 / SMS 1145 → Stainless steel 1.4404/316L
- Coupling ISO 2853 / DIN 11864-1 → Stainless steel 1.4404/316L
- Tri-Clamp (OD-Tubes) → Stainless steel 1.4404/316L
- VCO connection → Stainless steel 1.4404/316L

*Promass F (high-temperature version):*

- Flanges EN 1092-1 (DIN 2501) / ANSI B16.5 / JIS B2238 → Stainless steel 1.4404/316L
- Flanges EN 1092-1 (DIN 2501) / ANSI B16.5 / JIS B2238 → Alloy C-22 2.4602 (N 06022)

*Promass M:*

- Flanges EN 1092-1 (DIN 2501) / ANSI B16.5 / JIS B2238 → Stainless steel 1.4404/316L, titanium Grade 2
- Flange DIN 11864-2 Form A (flat flange) → Stainless steel 1.4404/316L
- PVDF coupling to DIN / ANSI / JIS
- Dairy fitting DIN 11851 / SMS 1145 → Stainless steel 1.4404/316L
- Coupling ISO 2853 / DIN 11864-1 → Stainless steel 1.4404/316L
- Tri-Clamp (OD-Tubes) → Stainless steel 1.4404/316L

*Promass M (high-pressure version):*

- Connector → Stainless steel 1.4404/316L
- Coupling → Stainless steel 1.4401/316

**Measuring tube(s):**

*Promass F:*

- DN 8 to 100: stainless steel 1.4539 (904L)
- DN 150: stainless steel 1.4404/316L
- DN 250: stainless steel 1.4404/316L; manifold: CF3M
- DN 8 to 150: Alloy C-22 2.4602/N 06022

*Promass F (high-temperature version):*

- DN 25, 50, 80: Alloy C-22 2.4602/N 06022

*Promass M:*

- DN 8 to 50: Titanium grade 9
- DN 80: Titanium grade 2

*Promass M (high-pressure version):*

- Titanium Grade 9

**Seals:**

*Promass F:*

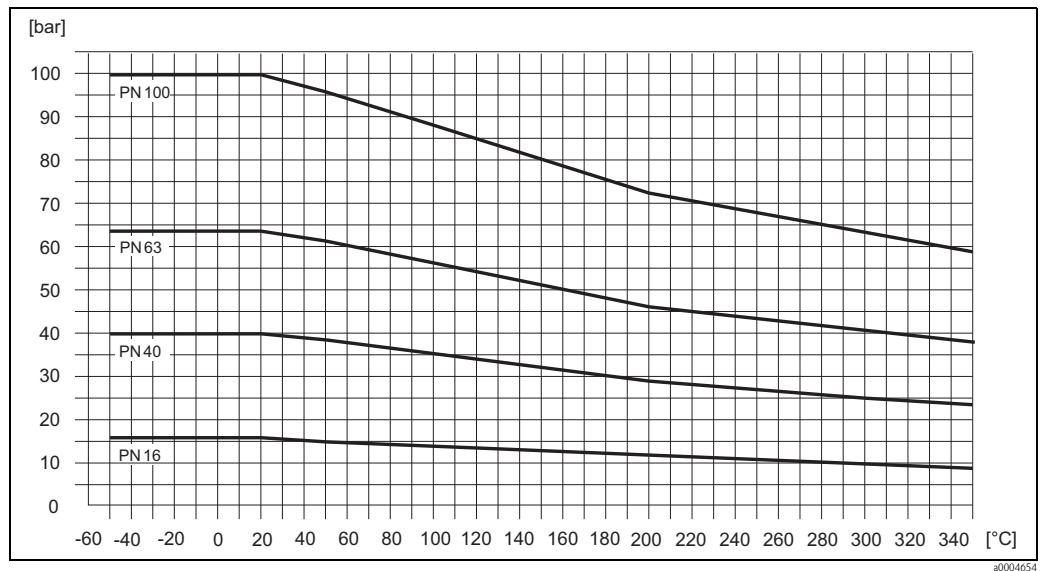

Welded process connections without internal seals

*Promass M:*

Viton, EPDM, silicone, Kalrez, FEP sheathing (not for gas applications)

**Material load diagram****Promass F: Flange connection to EN 1092-1 (DIN 2501)**

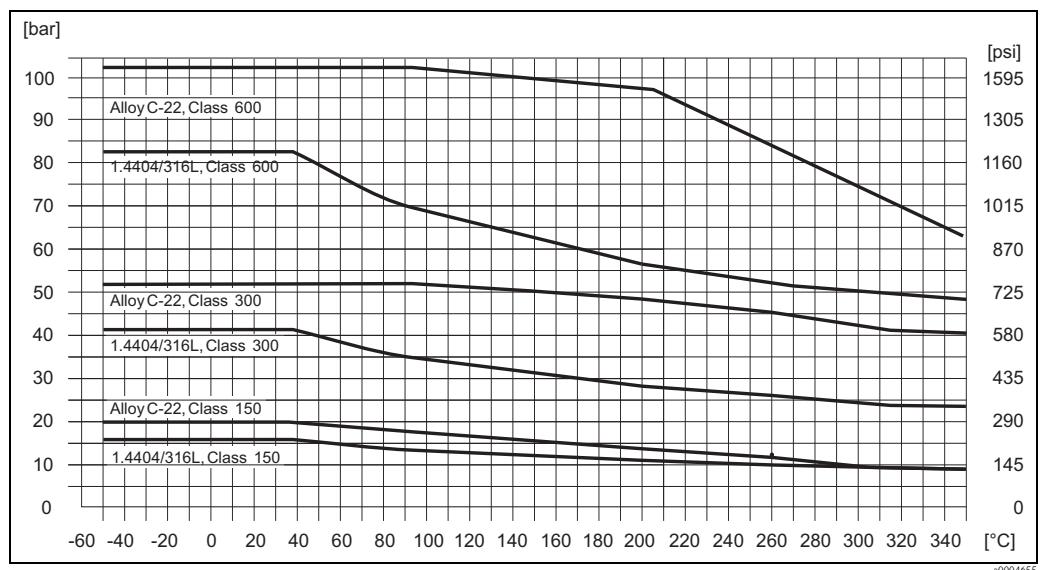

Flange material: 1.4404/316L, Alloy C-22

The values for the temperature range from 200 °C to 350 °C are exclusively valid for Promass F (HT) high-temperature version.

**Promass F: Flange connection to ANSI B16.5**

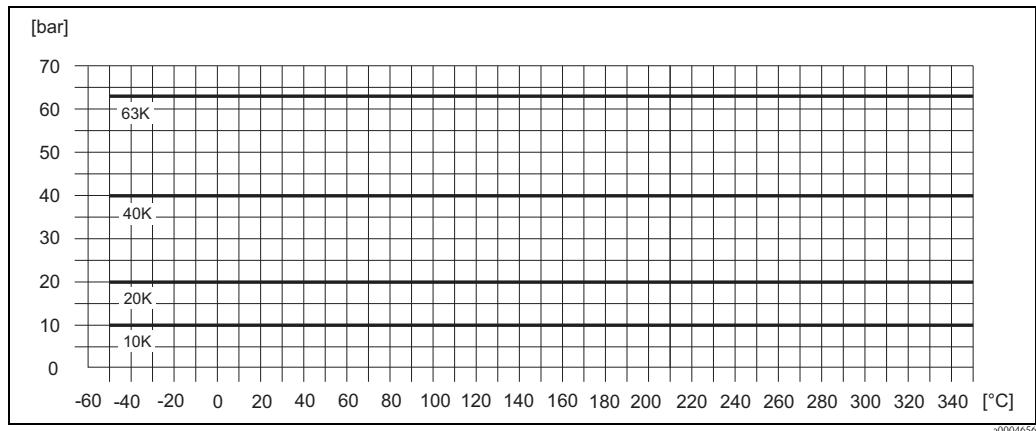

Flange material: 1.4404/316L, Alloy C-22

The values for the temperature range from 200 °C to 350 °C are exclusively valid for Promass F (HT) high-temperature version.

**Promass F: Flange connection to JIS B2238**

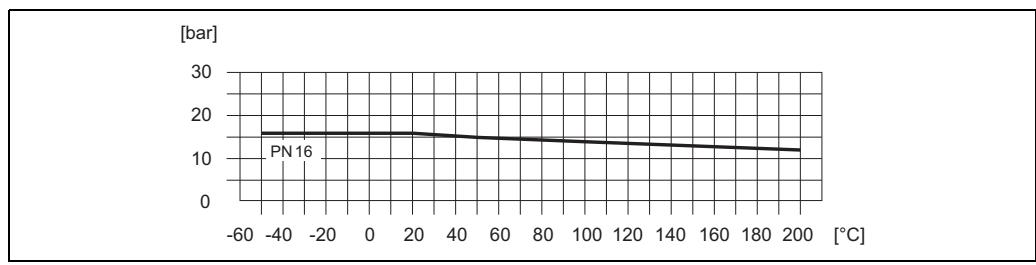

Flange material: 1.4404/316L, Alloy C-22

The values for the temperature range from 200 °C to 350 °C are exclusively valid for Promass F (HT) high-temperature version.

**Promass F: Dairy fitting to DIN 11851 / SMS 1145**

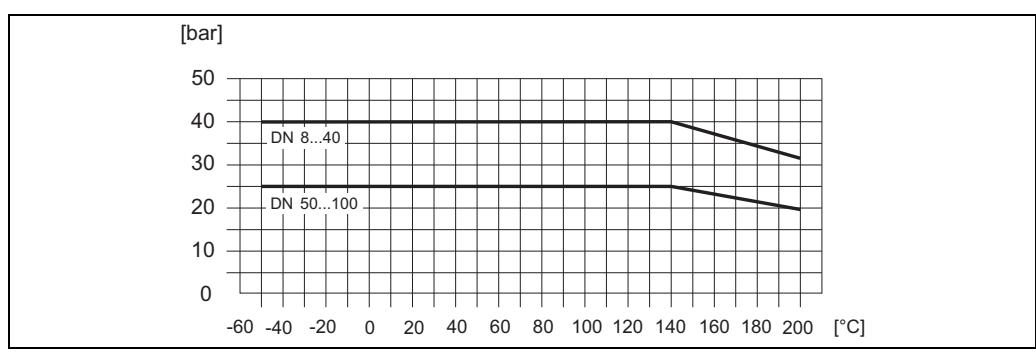

Connection material: 1.4404/316L

**Promass F: Tri-Clamp process connection**

The load limit is defined exclusively by the material properties of the outer clamp used. This clamp is not included in the scope of delivery.

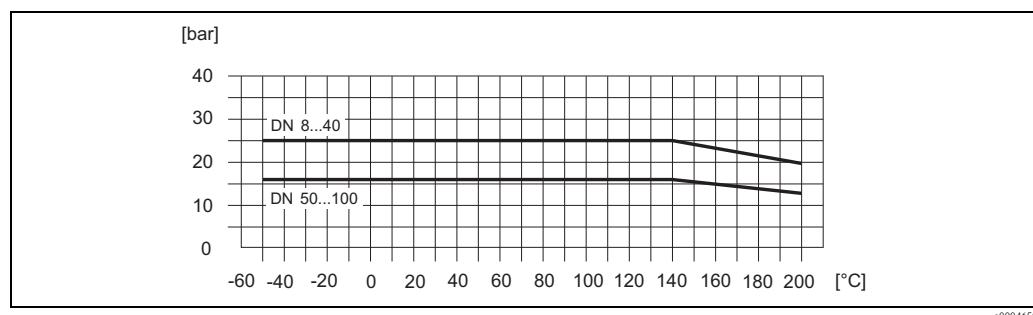

**Promass F: Coupling to DIN 11864-1**

Connection material: 1.4404/316L

**Promass F: Flange connection to DIN 11864-2 Form A (flat flange)**

## Certificates and approvals

<b>CE mark</b>	The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
<b>Ex approval</b>	Information about currently available Ex versions (ATEX, FM, CSA) can be supplied by your Endress+Hauser Sales Center on request. All explosion protection data are contained in separate explosion protection documentation which you can order if required.
<b>Sanitary compatibility</b>	<ul style="list-style-type: none"> <li>■ 3A approval</li> </ul>
<b>FOUNDATION Fieldbus certification</b>	<p>The flow device has successfully passed all the test procedures carried out and is certified and registered by the Fieldbus FOUNDATION. The device thus meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> <li>■ Certified to FOUNDATION Fieldbus Specification</li> <li>■ The device meets all the specifications of the FOUNDATION Fieldbus H1.</li> <li>■ Interoperability Test Kit (ITK), revision status 4.0 (device certification number: on request)</li> <li>■ The device can also be operated with certified devices of other manufacturers</li> <li>■ Physical Layer Conformance Test of the Fieldbus FOUNDATION</li> </ul>

<b>PROFIBUS DP/PA certification</b>	The flow device has successfully passed all the test procedures carried out and is certified and registered by the PNO (PROFIBUS User Organization). The device thus meets all the requirements of the following specifications: <ul style="list-style-type: none"> <li>■ Certified to PROFIBUS Profile Version 3.0 (device certification number; on request)</li> <li>■ The device can also be operated with certified devices of other manufacturers (interoperability)</li> </ul>																		
<b>MODBUS certification</b>	The measuring device meets all the requirements of the MODBUS/TCP conformity and integration test and has the “MODBUS/TCP Conformance Test Policy, Version 2.0”. The measuring device has successfully passed all the test procedures carried out and is certified by the “MODBUS/TCP Conformance Test Laboratory” of the University of Michigan.																		
<b>Other standards and guidelines</b>	<ul style="list-style-type: none"> <li>■ EN 60529 Degrees of protection by housing (IP code)</li> <li>■ EN 61010 Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures.</li> <li>■ EN 61326/A1 (IEC 1326) “Emission in accordance with Class A requirements”. Electromagnetic compatibility (EMC requirements).</li> <li>■ NAMUR NE 21 Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment.</li> <li>■ NAMUR NE 43 Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.</li> <li>■ NAMUR NE 53 Software of field devices and signal-processing devices with digital electronics</li> </ul>																		
<b>Pressure measuring device approval</b>	Flowmeters with a nominal diameter smaller or equal DN 25 are covered by Art. 3(3) of the European directive 97/23/EC (Pressure Equipment Directive) and are designed according to sound engineering practice. For larger nominal diameters, optional approvals according to Cat. II/III are available if required (depends on fluid and process pressure).																		
<b>Functional safety</b>	<p>SIL -2: accordance IEC 61508/IEC 61511-1 (FDIS)</p> <p>“4–20 mA” – output according to the following order code:</p> <p><b>Promass 80</b></p> <p>Promass80***_*****A      Promass80***_*****D      Promass80***_*****S      Promass80***_*****T      Promass80***_*****8</p> <p><b>Promass 83</b></p> <table> <tbody> <tr> <td>Promass83***_*****A</td> <td>Promass83***_*****M</td> <td>Promass83***_*****Ø</td> </tr> <tr> <td>Promass83***_*****B</td> <td>Promass83***_*****R</td> <td>Promass83***_*****2</td> </tr> <tr> <td>Promass83***_*****C</td> <td>Promass83***_*****S</td> <td>Promass83***_*****3</td> </tr> <tr> <td>Promass83***_*****D</td> <td>Promass83***_*****T</td> <td>Promass83***_*****4</td> </tr> <tr> <td>Promass83***_*****E</td> <td>Promass83***_*****U</td> <td>Promass83***_*****5</td> </tr> <tr> <td>Promass83***_*****L</td> <td>Promass83***_*****W</td> <td>Promass83***_*****6</td> </tr> </tbody> </table>	Promass83***_*****A	Promass83***_*****M	Promass83***_*****Ø	Promass83***_*****B	Promass83***_*****R	Promass83***_*****2	Promass83***_*****C	Promass83***_*****S	Promass83***_*****3	Promass83***_*****D	Promass83***_*****T	Promass83***_*****4	Promass83***_*****E	Promass83***_*****U	Promass83***_*****5	Promass83***_*****L	Promass83***_*****W	Promass83***_*****6

## Ordering information

The Endress+Hauser service organization can provide detailed ordering information and information on the order codes on request.

## Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor.

Note!

The Endress+Hauser service organization can provide detailed information on the order codes on request.
