Technical Information

Fieldgate Solution FXA360, FXA560

Gateways / Interfaces

Gateway for Remote Monitoring of Sensors and Actuators
via Web Browsers

Application

The Fieldgate Solutions FXA360 and FXA560 are customer-specific solutions, completely installed and wired inside a cabinet, for applications in the area of inventory control. With the integrated telemetry unit Fieldgate FXA320 or FXA520, inventory data from geographically widely distributed tanks or silos can be transmitted to an inventory management system using Internet technology. Up to 30 transmitters can be connected to the FXA560, and both passive (2-wire) and active (4-wire) transmitters can be connected. The size of the cabinet depends on the number of transmitters to be connected, which are ordered from the sales structure.

Your benefits

- Quick and cost-effective commissioning with completely assembled and wired cabinet.
- Customer-specific solutions mean that customers order and pay for the exact configuration they need for their application, no more and no less.
- Remote monitoring via modem, Ethernet or GSM/GPRS.
- Visualisation with web browser or WAP-enabled mobile phone.
- Intrinsically safe version for applications in Ex hazardous areas.
- With the HART protocol, up to 30 transmitters can be connected.
- Limit monitoring with alarms via e-mail or SMS.

Applications

Vendor Managed Inventory

By using Fieldgates to interrogate tank or silo levels remotely, suppliers of raw materials can provide their regular customers with information about the current supplies at any time and, for example, account for them in their own production planning. For their part, the Fieldgates monitor the configured level limits and, if required, automatically activate the next supply. The spectrum of options here ranges from a simple purchasing requisition via e-mail through to fully automatic order administration by coupling XML data into the planning systems on both sides.

L00-FXA360cx-02-00-06-en-001

Communication interface

Internet connection

If the Fieldgate dials into the Internet permanently via an Internet Service Provider, it is also possible for several users to access the Fieldgate simultaneously when using an analogue/GSM version. The other advantage is that the respective user does not require a modem as a receiver at the work place.

Ethernet

The 10 Base T Ethernet interface with RJ45 plug-in connection can be connected to the local network using a hub or switch. A standard network cable is used for this. In Ethernet operation, you always have access to the Fieldgate with a standard web browser, since the device is constantly available in the network. Several PCs can access the Fieldgate simultaneously.

Telephone network (analogue)

The Fieldgate is connected to the available telephone network via an RJ11 (PSTN) plug connector. This form of communication is always a point-to-point connection and only one PC can communicate with the device at any one time. In this configuration, the Fieldgate has to be selected before each access, so that it is ready for online operation. For example, the Windows internal telecommunications network can be used for dialling. After this, the Fieldgate can be accessed with a standard web browser (e.g. Internet Provider). The Fieldgate is also capable of dialling itself into a central server, in order to deliver periodic measured values for example. Here, it is also possible to transfer the measured values via the Internet using an Internet Service Provider.

Mobile communications network (GSM)

If there is no Ethernet or telephone network available in the Fieldgate's operating location, the data can also be transferred via GSM using the mobile communications network.

These communications versions can be configured as point-to-point connections or as freely accessible via the Internet/Intranet. A SIM card from a mobile communications network operator is required for GSM operation. Communication takes place via the data channel of the SIM card, which may require additional activation, depending on the GSM provider.

L00-FXA520xx-02-00-06-en-005

GPRS support

GPRS (General Packet Radio Services) is a mobile communications technique, which exploits the advantages of packet-oriented data transmission and channel bundling.

Different from normal GSM connections, no complete channel is reserved for the duration of the connection between the mobile device and the basis station, rather the data is packed into packets, which can be sent depending on requirement and capacity. Data transmission in packets enables not only greater transmission rates but also always-on-operation. The Fieldgate is thus permanently in a position to connect to the Internet, an Intranet or a mailbox, whereby data is only transferred as required if a new e-mail is sent or a new Internet page is called up. Here, you are only charged for the amount of data actually transmitted (and not for connection time).

The GPRS mode of the Fieldgate GSM thus offers the easiest and most cost-effective option for connecting a measuring point permanently to the Internet or an Intranet. Thanks to always-on-operation, the WAP functions of the Fieldgate can also be used easily and cost-effectively.

To use the available GPRS functions, the GSM/GPRS provider will need to allocate a public IP address. It will be necessary to determine in each individual case, whether this additional service is offered by the respective operator.

Function and system design

Measuring system

Fieldgate Solution FXA360 - with Fieldgate FXA320

- Two transmitters can be connected directly.
- Active/passive current input pre-set according to order.
- Display for 4...20 mA current input (optional).
- Intrinsically safe inputs (optional).

L00-FXA360xx-14-00-06-en-001

The following can be connected to the FXA360:

- Max. 2 transmitters (to the 4...20 mA analogue input)
- 4 transmitters (to the four binary inputs with event counter function and frequency measurement)

Active or passive current inputs can be selected in the sales structure.

- For example, 2-channel active means:
both channels are supplied with voltage and are suitable for two-wire 4...20 mA transmitters (loop-powered).
- For example, 2-channel passive means:
both channels are configured for connection to four-wire transmitters with active current output.

The two channels always have galvanic isolation. Optionally, the current inputs can be ordered with intrinsically safe explosion protection. The optional display RIA251 (display range -19,999 to 99,999) is looped into the 4...20 mA circuit.

The following cabinet sizes are available:

Dimensions / material	Approval	Number of channels	With galvanic isolation	Number of displays
300 x 300 x 210 mm / steel	Hazardous/non-hazardous area	2	Yes	Max. 2
300 x 400 x 200 mm / plastic	Hazardous/non-hazardous area	2	Yes	Max. 2

Note!

For connection, see "Connection types FXA360" on Page 13.

Fieldgate Solution FXA560 - with Fieldgate FXA520 (2-channel HART)

- Two transmitters can be connected directly.
- Can also be used in hazardous areas.
- Suitable for use in 4...20 mA SIL 2 Loops (IEC 61508)

L00-FXA560xx-14-00-06-en-007

In the 2-channel HART connection type, a maximum of 2 transmitters can be connected with the HART protocol. Optionally, the transmitters can be supplied with voltage. If 4-wire transmitters with active current output will be connected, "none" must be selected under "sensor power supply" in the order. The two channels always have galvanic isolation.

The following cabinet sizes are available:

Dimensions / material	Approval	Number of channels	Power supply with galvanic isolation	Number of displays
300 x 300 x 210 mm / steel	Hazardous/non-hazardous area	2	Yes	Max. 2
300 x 400 x 200 mm / plastic	Hazardous/non-hazardous area	2	Yes	Max. 2

Note!

For connection, see "Connection types FXA560/2-channel connection, active" on Page 15.

Fieldgate Solution FXA560 - with Fieldgate FXA520 (HART Multiplexer)

- HART Multiplexer, such as the KFD2-HMM-16 from Pepperl + Fuchs.
- Up to 30 transmitters (2 x 15) can be connected.

L00-FXA560ex-14-00-06-en-005

In the "HART Multiplexer" connection type, a maximum of 30 transmitters can be connected. Both transmitters with active and passive current outputs can be connected. If, for example, "active/passive" is selected as the connection type, either active or passive current outputs can be connected. Optionally, the transmitters can also be supplied with voltage.

The following options are available:

- Without galvanic isolation (all transmitters are supplied by one voltage source and thus are galvanically bonded to each other).
- With galvanic isolation (each transmitter is supplied by one transmitter power supply. Therefore, all transmitters are galvanically isolated from each other.) This option is recommended in order to prevent earth loops.
- The power supply can also be designed with "intrinsically safe" explosion protection.

The cabinet size depends on which of the various components are selected for a certain version. In particular, these are:

- The number of transmitters to be connected, whether with or without sensor power supply,
- Non-hazardous or hazardous area version,
- The number of displays

Note!

For connection, see "Connection types FXA560/HART Multiplexer connection" on Page 17.

The following cabinet sizes are available:

Versions with sensor power supply				
Dimensions / material	Approval	Number of channels	With galvanic isolation	Number of displays
380 x 380 x 210 mm / steel	Non-hazardous area	3 - 16	No	Max. 2
400 x 400 x 200 / plastic	Non-hazardous area	3 - 16	No	Max. 2
380 x 600 x 210 mm / steel	Non-hazardous area	3 - 16	No	Max. 4
400 x 600 x 200 / plastic	Non-hazardous area	3 - 16	No	Max. 4
380 x 380 x 210 mm / steel	Non-hazardous area	17 - 30	No	Max. 2
400 x 400 x 200 / plastic	Non-hazardous area	17 - 30	No	Max. 2
380 x 600 x 210 mm / steel	Non-hazardous area	17 - 30	No	Max. 4
400 x 600 x 200 / plastic	Non-hazardous area	17 - 30	No	Max. 4
380 x 600 x 210 mm / steel	Non-hazardous area	3 - 16	Yes	Max. 4
400 x 600 x 200 / plastic	Non-hazardous area	3 - 16	Yes	Max. 4
600 x 600 x 210 mm / steel	Non-hazardous area	17 - 30	Yes	Max. 8
600 x 600 x 200 / plastic	Non-hazardous area	17 - 30	Yes	Max. 8
380 x 600 x 210 mm / steel	Hazardous area	3 - 10	Yes	Max. 4
400 x 600 x 200 / plastic	Hazardous area	3 - 10	Yes	Max. 4
600 x 600 x 210 mm / steel	Hazardous area	11 - 16	Yes	Max. 8
600 x 600 x 200 / plastic	Hazardous area	11 - 16	Yes	Max. 8
600 x 600 x 210 mm / steel	Hazardous area	17 - 30	Yes	Max. 8
600 x 600 x 200 / plastic	Hazardous area	17 - 30	Yes	Max. 8

Versions without sensor power supply				
Dimensions / material	Approval	Number of channels	With galvanic isolation	Number of displays
380 x 380 x 210 mm / steel	Non-hazardous area	3 - 16	Yes ¹⁾	Max. 2
400 x 400 x 200 / plastic	Non-hazardous area	3 - 16	Yes ¹⁾	Max. 2
380 x 600 x 210 mm / steel	Non-hazardous area	3 - 16	Yes ¹⁾	Max. 4
400 x 600 x 200 / plastic	Non-hazardous area	3 - 16	Yes ¹⁾	Max. 4
380 x 380 x 210 mm / steel	Non-hazardous area	17 - 30	Yes ¹⁾	Max. 2
400 x 400 x 200 / plastic	Non-hazardous area	17 - 30	Yes ¹⁾	Max. 2
380 x 600 x 210 mm / steel	Non-hazardous area	17 - 30	Yes ¹⁾	Max. 4
400 x 600 x 200 / plastic	Non-hazardous area	17 - 30	Yes ¹⁾	Max. 4

1) Galvanic isolation is not possible with 8x display!

Optionally, each channel can also be equipped with a display. 1-channel or 8-channel displays are available. In the 8-channel display, 8 channels are combined into one display and polled either automatically or manually.

Galvanic isolation

Note!

In installations without galvanic isolation, particularly those with long lines, potential differences can arise that can cause earth loops and equalising currents. Therefore, the option with galvanic isolation is recommended.

Fieldgate Solution FXA560 - with Fieldgate FXA520 (HART Multidrop Configuration)

- Only HART communication possible.
- Up to 16 transmitters (2 x 8) can be connected, with Multidrop fixed current 4 mA.
- All connected transmitters must be assigned their own HART short address in advance.

L00-FXA560xx-14-00-06-en-003

In the standardised HART Multidrop mode, the transmitters are operated in parallel as fieldbus devices.

Up to 15 transmitters can be connected to each segment.

The FXA560 supports the ability to connect 2 segments.

In Multidrop mode, the measured value is transmitted only digitally via the HART protocol, where the signal current is always fixed (typically 4 mA). Also, no display is possible in this mode.

The following cabinet sizes are available:

Dimensions / material	Approval	Number of segments	With galvanic isolation	Number of displays
300 x 300 x 210 mm / steel	Non-hazardous area	2	No	Without

Note!

For connection, see "Connection types FXA360/HART Multidrop connection" on Page 21.

All E+H measuring devices with the HART protocol can, therefore, be used to the full extent with the Fieldgate

A current list of all E+H measuring devices that have the HART protocol can be found under:

- www.hartcomm.org: "HART Products/Product Catalogue/ ...".

All Endress+Hauser measuring devices with HART protocol can be connected to the Fieldgate.

Even 4...20 mA devices without HART protocol can be operated in conjunction with the Fieldgate, e.g. limit switch (Liquiphant, ...). However, then only the measured value can be read. The remote maintenance function is not given for 4...20 mA devices because the HART protocol is required for this function.

Input

Analogue 4...20 mA inputs (FXA360 only)

FXA320

2 channels with galvanic isolation. Can be used independently as active or passive input.

Channel 1&2 - active	
Output voltage	15 V $\pm$ 5% / (22 mA)
No-load voltage	23.5 V $\pm$ 5%
Output current	max. 23 mA
Short-circuit current	max. 64 mA
short-circuit duration	Unlimited
Connection cable	Instrument cable, unscreened
Cable resistance	max. 25 Ω per core

Channel 1&2 - passive	
Max. input voltage per channel	35 V
Max. input current per channel	45 mA
Input impedance	254 Ω
Accuracy	$\leq$ 0.5 %
Voltage drop (incl. diode against reverse polarity)	$\leq$ 6.4 V
Connection cable	Instrument cable, unscreened
Cable resistance	max. 25 Ω per core

HART channel 1&2 (FXA560 only)

FXA520

The HART signal is capacitive coupled and decoupled via a communication resistor

Communication resistor in the 4...20 mA signal line	Integrated 270 Ω communication resistor, for optional use, max. 45 mA!
Short-circuit duration (without interior communication resistor)	Unlimited

Passive connection

- Galvanic isolation between HART channel 1 and channel 2
- Ex isolation between transmitters and internal circuits.

Output voltage U ₀ in the event of a fault (Ex)	Max. 6.5 V
Max. current for EEx ia (Ex)	5.97 mA
Max. output power (Ex)	39 mW
Maximum input voltage (Ex)	30 V
Maximum input voltage (non-Ex)	45 V

Active connection in non-hazardous area, galvanic isolation

- Galvanic isolation between HART channel 1 and channel 2
- For connection data, see:
 - TI081R/09/de for transmitter power supply RNS221

Active connection in hazardous area, galvanic isolation

- Galvanic isolation between HART channel 1 and channel 2
- For connection data, see:
 - TI073R/09/de for active barrier RN221N

Active connection >3 channels in non-hazardous area, galvanic isolation

- Galvanic isolation between HART channel 1-30
- For connection data, see:
 - TI081R/09/de for transmitter power supply RNS221

 - BA283F/00/de for HART Multiplexer Slave KFD0-HMS-16
 - BA266F/00/en and BA267F/00/de for Multiplexer Interface Module
 - TI063R/09/de for process display RIA251

Active connection >3 channels in hazardous area, galvanic isolation

- Galvanic isolation between HART channel 1-30
- For connection data, see:
 - TI073R/09/de for active barrier RN221N

Connection >3 channels without galvanic isolation

- Common power supply of HART channels 1-30
- For connection data, see:
 - 24 V with 250 Ω communication resistor in the interface module
 - BA265F/00/de for HART Multiplexer Master KFD2-HMM-16
 - BA283F/00/de for HART Multiplexer Slave KFD0-HMS-16
 - BA266F/00/en and BA267F/00/de for Multiplexer Interface Module
 - TI063R/09/de for process display RIA251

Binary inputs**FXA320**

Galvanic isolation of all channels from the rest of the current circuits. Each 2 channels have the same reference potential.

Number of digital inputs	4
Input signal voltage	L-signal: -3 ... +5 V H-signal: +15 ... +30 V
Input current with H-signal	5 mA
Max. quiescent current with L-signal	1 mA
Measuring range of event counter function	0 ... 12.5 kHz
Measuring range of frequency measurement	4.7 Hz ($\pm 1\%$) ... 12.5 kHz ($\pm 4\%$)

**RN221N
Active barrier**

For information, see Technical Information TI073R/09/de.

**RNS221
Transmitter power supply**

For information, see Technical Information TI081R/09/de.

Multiplexer interface module

For information, see Operating Instructions BA266F/00/en and BA267F/00/de.

Power supply

Supply voltage

Alternating current version (AC):

Voltage range: 90...253 V, 50/60 Hz.

Safe galvanic isolation between mains supply and internal circuits.

Direct current version (DC):

Voltage range: 20...30 V_{DC}.

Cable entry

- Cable entry for connecting the transmitters: M20x1.5
- In the Multidrop configuration: either M20x1.5 or as 7/8" plug (Fieldbus Foundation standard)
- In each unit, 2 M20x1.5 cable glands are screwed in for the power supply.

The number of cable glands for the transmitters can be defined in the order information (see Page 30 and 32).

Connection types FXA360

9	Switch position (up)			active		active
	Switch position (down)			passive		passive

Operation concept

Fieldgate offers world-wide remote monitoring, remote diagnosis and remote configuration of Smart transmitters with the international used HART® protocol. Measured values become available world-wide via Internet and can be efficiently processed. A standard web browser is used for visualising and remote inquiry. Fieldgate displays parameters and measured values of field instruments on an HTML page. Max. 30 measured values can be displayed. Up to 4 measured values can be displayed per device.

Fieldgate FXA560

Certificates and approvals

CE mark	The FXA360/560 meets the legal requirements of the EC directives. Endress+Hauser confirms that the device has been successfully tested by applying the CE label.
Ex-approval	See Ordering information on Page 29 and 31
Explosion protection	FXA560 - active connection See documentation for active barrier RN221N. FXA360 - active connection See documentation for active barrier RN221N. FXA560 2-channel HART, passive See documentation for Fieldgate FXA520.
Other standards and guidelines	Other standards and guidelines that have been observed when designing and developing the Fieldgate. EN 60529 Ingress protections for housing (IP code) EN 61010 Safety requirements for electrical equipment for measurement, control and laboratory use

Telecommunications Regulatory Compliance

Fieldgate analogue version

North America

FCC CFR 47, part 15 and part 68

Europe

Telecoms Terminal Equipment Directive (98/13/EG)

European approval TBR 21

Fieldgate GSM version

North America

FCC CFR 47 Part 15 and Part 24

Federal Communications Commission Notice

This device generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

To ensure that the unit complies with current FCC regulations and safety requirements limiting both maximum RF output power and human exposure to radio frequency radiation, use an antenna with a maximum gain of 2dBi and a separation distance of at least 20 cm must be maintained between the unit's antenna and the body of the user and any nearby persons at all times and in all applications and uses.

Modifications

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Endress+Hauser may void the user's authority to operate the equipment.

Federal Communications Commission Statement

FCC-ID: LCG-FG-FXA52X-32X

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

Wireless Notices

In some situations or environments, the use of wireless devices may be restricted. Such restrictions may apply aboard airplanes, in vehicles, in hospitals, near explosives, in hazardous locations, etc. If you are uncertain of the policy that applies to the use of this device, please ask for authorization to use it prior to turning it on.

Endress + Hauser

Note!
A PC cable is included in the scope of supply with FXA360/560.

Accessories

Note!

The following table gives an overview of possible application for the individual accessory parts with the Fieldgate Solution FXA360 or FXA560.

Accessory	Fieldgate Solution FXA360	Fieldgate Solution FXA560
DAT module	X	X
PC cable	X	X
Telephone cable (analogue version only)	is required	is required
Fieldgate OPC server	X	X
Java applets	X	X
Antenna (GSM version only)	is required	is required
HART Client (FXA560 only)	—	X
Multiplexer (FXA560 only)	—	X
E+H power supply units (FXA560 only)	—	X
24 V switched-mode power supply (Phoenix)		
Process display RIA251		
Process display OC7421		
Fieldgate FX320	X	—
Fieldgate FX520	—	X
WLAN components		

DAT module

An external EEPROM, in which the configuration data is saved identically to the internal EEPROM, can be attached optionally via plug. For example, this allows for the FXA360/560 to be changed in the event of a defect, without losing the customer-specific configuration data.
Order number: 52013311.

PC cable

A PC can be connected to the FXA360/560 for configuration purposes via a serial RS 232 connection. Order number: 52013984.

Telephone cable

RJ11 (analogue plug, double-sided, length: 5 m).
Order number: 52014031.

Fieldgate OPC server

The Fieldgate OPC server provides an interface between one or more Endress+Hauser Fieldgate devices and all possible OPC Data Access 2.0 compatible Clients. The Fieldgate can be connected via a dial-up modem or through a TCP/IP network.

Java applets

Java applets for a customised view of the screen.

Antenna

Antenna for communication via mobile communications (GSM):

- Tri-band flat antenna (900/1800/1900 MHz).
Order number: 52018396.
- Dual-band station antenna (900/1800 MHz).
Order number: 52018395.

HART Client (FXA560 only)

The HART Client is a free add-on which is required for remote configuration via HARTtools (e.g. with ToF Tool - FieldTool Package, ReadWin, ...). You can download the current software version from the Internet from the Endress+Hauser product pages (download: <http://www.endress.com>).

Multiplexer (FXA560 only)	Accessories for HART Multiplexer system (from Pepperl+Fuchs): ■ HART Multiplexer Master KFD2-HMM-16. Order number: 52017691. ■ Master-interface connecting cable. Order number: 52017687. ■ HART Multiplexer slave KFD0-HMS-16. Order number: 52020232. ■ Master-slave connecting cable. Order number: 52020233. ■ Interface module without communication resistor. Order number: 52017689. ■ Interface module with communication resistor. Order number: 52017690.
E+H power supply units (FXA560 only)	RMA422 Multifunctional 1-2-channel top-hat rail device with intrinsically safe current inputs and transmitter power supply, limit value monitoring, mathematics functions and 1-2 analogue outputs. RNS221 Power supply unit for supplying power to two two-wire sensors or transmitters in non-hazardous areas. RN221N Isolator with power supply for safely isolating 4...20 mA standard signal circuits. RMA421 Multifunctional 1-channel top-hat rail device with universal input, transmitter power supply, limit value monitoring and analogue output.
E+H Multidrop Connector FXN520 (FXA560 only)	Operation of several devices in Multidrop operation for FXA520. Order number: 52023652.
Solarbox (FXA360 only)	Self-sufficient current supply unit for FXA320 with solar panel. Order number: 52023445.
24 V switched-mode power supply (Phoenix)	For supplying the Multidrop lines with up to 28.5 volts. Power supply to the 8-channel display and multiplexer. Order number: 52027739.
Process display RIA251	1-channel display. Not for Multidrop mode.
Process display OC7421	8-channel display. Not for Multidrop mode. Order number: 52027746
Fieldgate FX320	Gateway for Remote Monitoring of Sensors and Actuators via Web Browsers.
Fieldgate FX520	Gateway for Remote Monitoring of Sensors and Actuators via Web Browsers.
WLAN components	Airpoint pro TOTAL WLAN access point. The device is available in the following versions: ■ Conforms to EN standard, order number: 52027750 ■ Conforms to NA standard, order number: 52027751 Airbridge TOTAL WLAN Ethernet client. The device is available in the following versions: ■ Conforms to EN standard, order number: 52027752 ■ Conforms to NA standard, order number: 52027753 E-TOP18 power unit 12 V power unit for power supply to the WLAN components. Order number: 52027740.
